

A glowing golden ring is centered in the frame, with the name "NIKOLA TESLA" written across it in a bold, golden, sans-serif font. The background is dark and filled with numerous small, sparkling particles that create a shimmering effect. The ring itself has a bright, glowing center, and the text is also illuminated from within, giving it a three-dimensional appearance.

NIKOLA TESLA

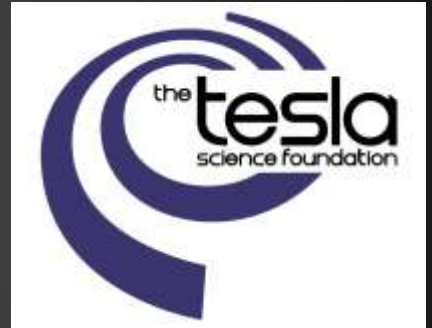

Tesla Science Foundation Mission

And How To Get Involved
by Nikola Lonchar

Nikola Lonchar

President/Founder of the Tesla Science
Foundation

Nikola Lonchar

Nikola Lonchar is a Pennsylvania licensed Private Detective, specializing in investigation after burglary (forensic examination and fraud examination).

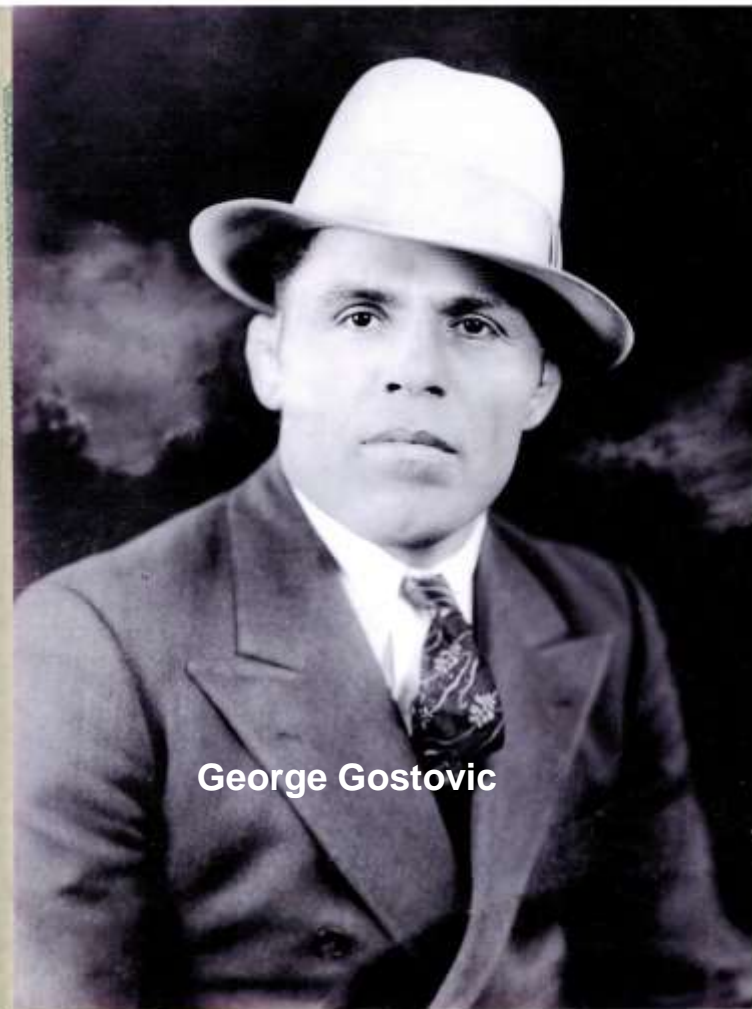

Nikola is a member of the National Association of Investigative Specialists, International Association of Investigative Locksmiths and International Association of Auto Theft Investigators. His specialization comes from a lifetime of working in various aspects of the security field.

In 1986, Mr. Lonchar began his career in security, opening a security company in Philadelphia. Working in mostly the high crime areas of the city, he realized that security systems were not sophisticated enough to repel the more experienced intruders.

Using years of experience in the security field and having seen every conventional method used by intruders, he designed a locking device which would have anywhere from four to twenty-four points and sensors which detected illegal entry. For his invention, he received the Benjamin Franklin Technology Center Grant, State of Pennsylvania Grant, and the Gold Medal of Nikola Tesla, an annual inventor's award.

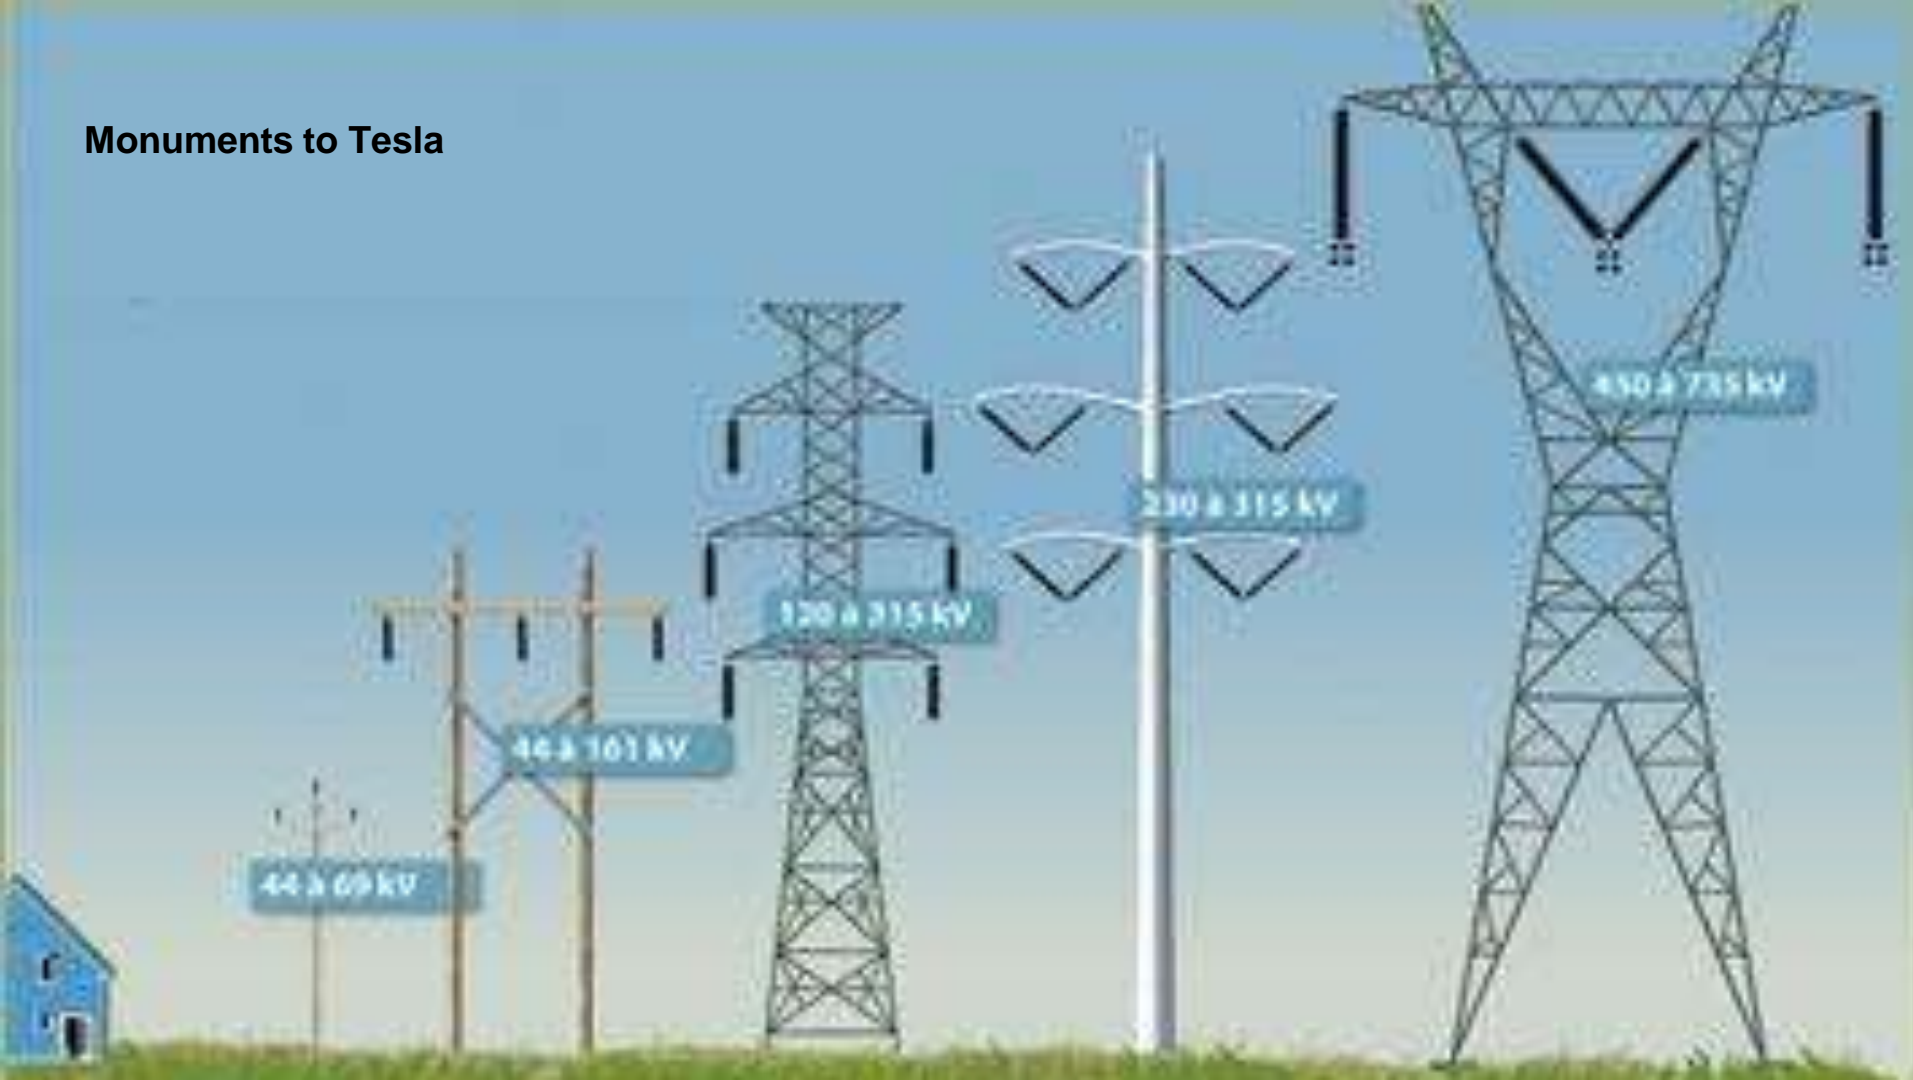

In 1998, he joined the National Association of Investigative Locksmiths.

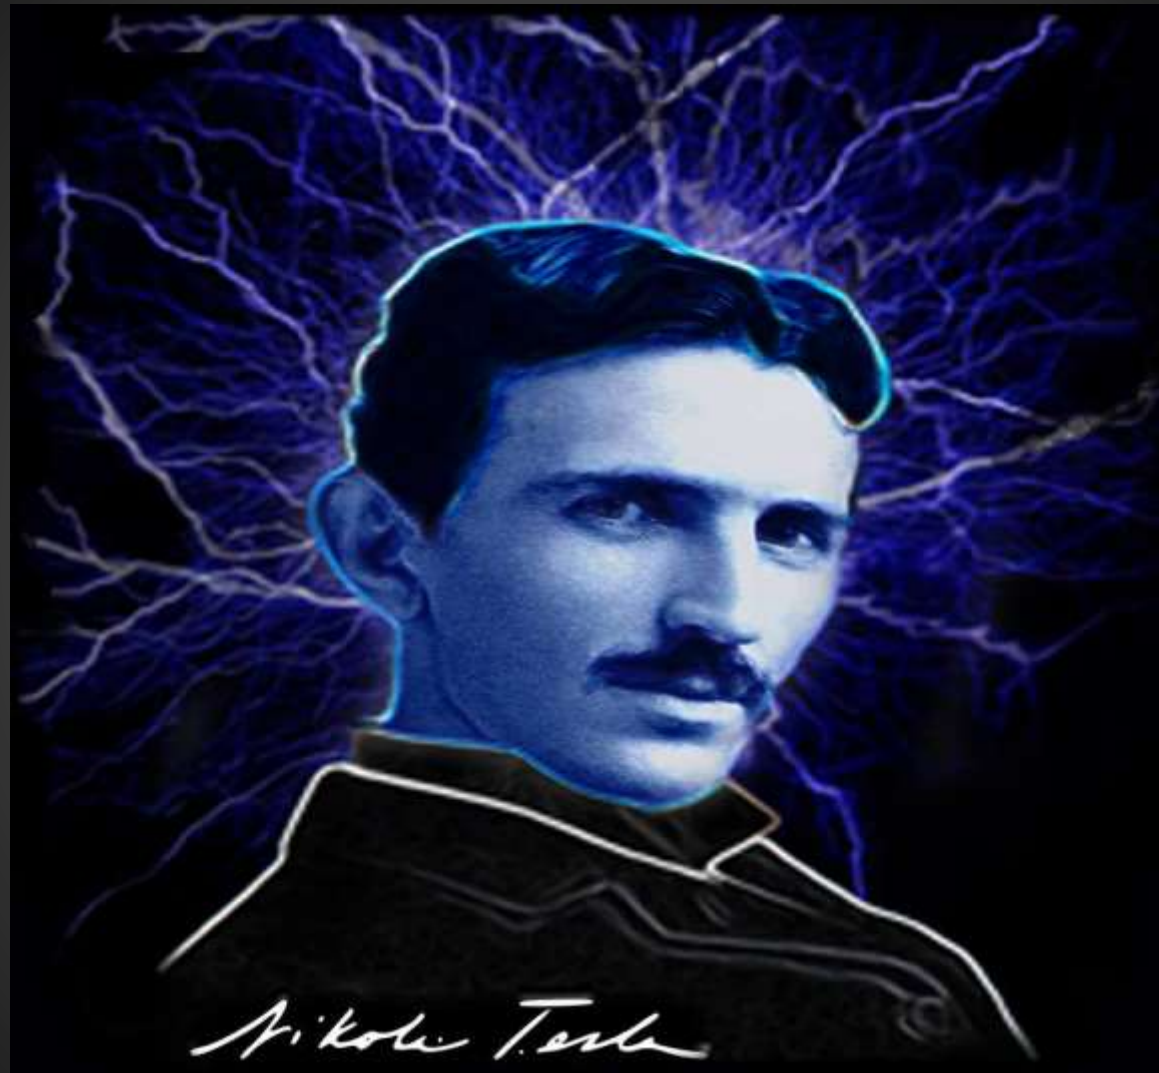

Long before this, Mr. Lonchar was inspired by another great man...

George Gostovic

Monuments to Tesla

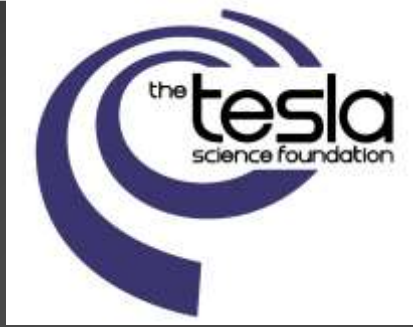

Nikola Tesla

TSF's 1st Spark

The Tesla Science Foundation got its start as the Nikola Tesla Inventors Club on July 10th, 2004. The goal of the organization was to promote the life and legacy of Nikola Tesla and to also give inventors interested in Tesla's work an opportunity to work together. We quickly realized that there was much more interest in Tesla than in an inventors club and formed the Nikola Tesla Club. The Nikola Tesla Club is still around and is a strong organization with affiliates in several different cities and countries. On January 7, 2010, the Tesla Science Foundation was officially incorporated as a 501(c)(3) nonprofit organization. Today, we have connected Tesla enthusiasts around the world. We have contact with over 12,000 people who share our vision of telling the world about Tesla. Additionally, we have found great opportunities to work with other Tesla-related organizations and there is strong interest in starting chapters all over the US and the world.

Our Mission

The Tesla Science Foundation was formed to promote the legacy of Nikola Tesla by raising awareness of his accomplishments and contributions to the 21st Century to include introducing his many patents and inventions that remain applicable to our current needs. We bring together those with a genuine interest in Tesla through educational programs, workshops, meetings, and public events. Tesla Science Foundation also selects several inventors per year who have demonstrated innovative technology concepts that exemplify Tesla's lifelong commitment to science, industry, and the environment. We are prepared to provide assistance to the patent process of new and innovative technologies to include introducing them to the market by forming an appropriate team of professionals including engineers, attorneys, and business/marketing specialists. The Tesla Science Foundation gives three awards each year for achievements in technology, writing and art related to Tesla or his work.

The Declaration of Energy Independence

WHAT ON EARTH IS HAPPENING
with Mark Passio

When in the course of human events, it becomes necessary for the people of Earth to dissolve the relationships, habits, and thought patterns that have bound us to an unsustainable energy paradigm, our conscience compels us to state our grievances with these outmoded systems, and to declare our intentions for the future of free energy. We hold these truths to be self-evident: that in our modern age, all means of energy production are not equal, some being polluting, limited, non-renewable and controlled by corporate-driven profit motives; while others are clean, abundant, sustainable, and able to be made available for the betterment of all people; that human innovation and creativity and has excelled beyond our current methodologies of energy production; that the current energy paradigm is ecologically unsound, economically unfeasible, socially divisive and morally bankrupt; that dependency on our current energy production methods has led to the increasing environmental degradation of our living planet, and to a growing systemic mentality of scarcity, lack, fear, aggression and imperialism; that free energy technology has been developed and suppressed for over a century and we need not be dependent on non-renewable energy for a moment longer; that the time is now for us to develop means of energy production and distribution that utilizes the inherent abundance of nature itself; that, as stated by the great scientist and inventor Nikola Tesla, science is but a perversion of itself unless it has, as its ultimate goal, the betterment of humanity; that whenever any energy model has been perpetuated toward a system of control, limitation, and the stagnation of humanity's collective evolutionary progress, it is the right and duty of the peoples of all nations to abandon the outmoded technologies upon which such systems are built, and transition toward those which are clean, renewable, and sustainable.

We, therefore, the free people of Earth, in good conscience, assembled, appealing to the Supreme Order of Nature for the rectitude of our intentions, do solemnly declare, that in our lifetimes, through our continued dedication, ingenuity and inspiration, we will bring to fruition a new and free energy paradigm, one in which empowering advancements in technologies are made widely available to all peoples, in the service of human potential. And for the support of this Declaration of Energy Independence, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes and our sacred honor

UNANSWERED QUESTIONS ABOUT TESLA

Finding the truth about Tesla is difficult because a lot has been fabricated. What if John O'Neill was Hoover's guy and took us in a whole different direction? O'Neill didn't release Tesla's biography until after Tesla's death. Why? All other Tesla authors went off of O'Neill's work.

Was the Wardenclyffe tower just an experiment for Tesla and why did he abandon the project? Did JP Morgan stop the project because there was no way to profit from free energy. Does someone with so much power really need an electric meter? Did Tesla stop the project because he feared his work would be used for the wrong purposes?

(Tesla said that the tower would work when the time was right).

They say the Tower was knocked down because it could be seen off shore by ships; isn't that true of the Empire State Building as well? Tesla didn't take even a single paper or instrument out of the lab. Why? Was Tesla playing a game with Hoover and the FBI?

Why was Tesla and his work wiped from US History? There is barely any mention of him anywhere in the Smithsonian. Tesla was a US citizen in lived in the US for 60 years. He created the second industrial revolution and helped bring the country out of the Great Depression. Tesla is not mentioned in the history books. Who was so powerful enough to wipe him out?

Will we ever have "Free Energy"? and will it be on the heels of Tesla's ideas? Will this lead to a third industrial revolution?

In 1943, the Supreme Court overturned Marconi's patent for improvements to the radio, citing that Tesla's patent predated Marconi's. Marconi received the Nobel Prize. Why hasn't Tesla received this kind of recognition?

START A TESLA CLUB IN YOUR CITY

What Do You Need to Start Your Own Tesla Club?

A group of Tesla Enthusiasts to act as an acting Board. You will need at least three members (a President, Secretary and Member at Large).

Have your first Board meeting and form an organization.

Arrange for free meeting space with your local library or at a local school or university.

Create a Facebook page for your chapter and arrange for your first meeting.

Find a lecturer or movie to show at the meeting and then open up the floor for discussion afterwards.

Create printed advertising materials and leave it around libraries, universities, coffee shops, etc.

Create a press release and send it out to all of the local newspapers and radio stations.

How to Finance Advertising

Keeping costs low is important, and it is also important to not charge dues. Dues limit membership and meeting/lecture locations available.

In the beginning, the Board members might bear the cost of printing materials, but you can gather donations and host events.

What We Will Do For You...

You will be in a network of Tesla-related groups across the world.

We will advertise your group and your events on our websites and [meetup.com](https://www.meetup.com) page.

You will be able to participate in our webinars

Art for printed materials

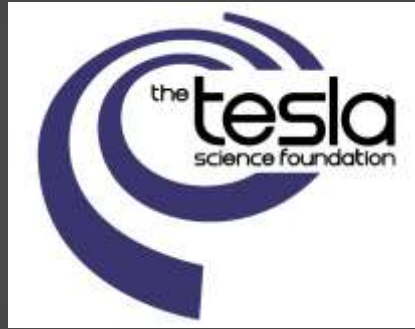

Assistance in starting a physical location which could include a coffee shop, bookstore, gallery, and display of Tesla's inventions.

Distribution of our Tesla Magnetized Water.

Direct contact with the Tesla Science Foundation's headquarters in Philadelphia, Zemun and Belgrade Serbia.

GET STARTED TODAY!

GETTING STARTED!

Please send us your CV, plan and, if available, list of board members

If you have any questions on the process feel free to contact us
